

AAVC35-SS/WI 35 Watt 70.7/25 Volt Volume Control

The AAVC35 is a high-quality, autoformer type, low insertion loss, step attenuator for constant voltage speaker lines which permits local control of volume while providing a consistent load to the 70.7 volt amplifier. The quiet rotary switch has silver plated contacts for years of trouble free use. Up to a 35 watt load may be placed after this control.

Attenuation of 33 dB is achieved in 10 incremental steps plus positive off. Two piece phoenix style compression terminals accept wire up to 14 gauge. Standard single gang electrical box or mud ring is suggested for mounting in the wall. When attaching wires, be sure to observe polarity.

Limited One Year Warranty. Some Exclusions apply.
